

Investing for Success

Under this agreement for 2017

Moreton Bay Environmental Education Centre will receive

\$5,000*

This funding will be used to

- Support an extension literacy initiative with a Young Writers program across the Wynnum Manly school education alliance (WMsea) cluster of schools.
- Support science initiatives (STEM Horizons) within the WMsea cluster of schools.

Our initiatives include

- Development and delivery of an extension literacy Young Writers Program, in partnership with an environmental author, where students enhance their writing skills by producing short stories which are published.
- Development and delivery of an extension primary school STEM Program to target high achieving students within the WMsea cluster.
- Initiation of a STEM professional learning community to enhance primary science teaching practices within selected science units.
- Promotion and sharing of positive outcomes through the WMsea Head of Curriculum, GEMS and Principals cluster.
- Offering quality STEM resources that schools would not normally be able to access from their own site.
- Providing professional development to teachers on 'working scientifically' and learning beyond the classroom.

Our school will improve student outcomes by

Part-funding an additional teacher (or equivalent resource) to assist with the development of the Young Writers literacy and STEM initiatives for delivery to the WMsea cluster of schools.	\$5 000
TOTAL:	\$5 000
